Vinyl - Weeding - Mounting to RTAPE

Cut vinyl needs the unused pieces weeded out before mounting the vinyl content to RTAPE for transferring to a substrate. If time permits, the BAP staff will cut vinyl and they will weed and mount. Otherwise the client will need to weed and mount to RTAPE under staff guidance.

Orafol ORACAL 651 INTERMEDIATE CALENDERED - 2.5-mil, intermediate calendered PVC film with excellent dimensional stability and very good cutting and application characteristics. Available in 60 vivid colors plus transparent. Clear, solvent-based, permanent adhesive. Ideal for medium-term indoor and outdoor lettering, marking and decoration.

Conform 4075 RTAPE - is standard weight paper application tape with a high tack rubber adhesive. It is ideal for masking of small and mid-sized die cut or prespaced vinyl and printed graphics. Standard paper application tape. High tack rubber adhesive. Removes easily following application. Use for mid-sized die-cut, pre-spaced vinyl letters, printed graphics, and banner graphics.

Orafol ORACAL 631 EXHIBITION CALENDERED - is a 3 mil, soft PVC film that can be removed with little or no adhesive for up to two years and a matte surface that suppresses unwanted reflection. Adhesive Clear - water-based, removable adhesive. Due to its special release characteristics, this film is ideal for use in short to medium term applications indoors; specifically on painted drywall surfaces. Designed for tradeshow, wall graphics, displays, and exhibitions.
