TECHNOLOGY USE IN THE POST-HUMAN WORLD

BRIANA ROBINSON

Topic

- In today's world, it is undeniable that we as people have become intertwined with the devices we use on a daily basis.

- This project will be focusing on how the current "post human" era has impacted our relationship with technology and, in particular, with the programs/software we use in both our work and creative lives daily.

Big Research Question

- Furthermore, I intend to look into how this directly ties into the evolution/transformation of technology itself and the inevitable impact it has on our transformation as human beings who exist in a digitally-driven society.

- One of the biggest questions I'm posing is this: Is there some deeper meaning behind why technology is increasingly impacting our lives to point where many of us can't imagine living without it?

Follow-up Questions

- Has technology literally altered the way our brains function and/or the way we interact with and understand other people?

- If so, are we truly different from people only decades ago or even decades ahead of us, depending on how things change in time?
