Prooging Paper				
Bond or Butcher Paper 36" x 100'	<i>Linear FT</i>	\$ 1.50	\$ 1.70	\$ 2.80

Archival Matte Media is a matte finish paper or canvas suitable for conventional posters and fine art printing. Matte surfaces can be scuffed or scratched. Flat black areas can be dulled by touch.

Coated Matte Media is a buffered lightweight coated paper for good color proofs and printing at a reasonable price.

Clear Film is a transparent polyester film with a water-based coating for encapsulating ink. It is suitable for producing positives and negatives for print and non-silver photo processes.

Resin Coated Photo Paper has satin and semigloss finishes. eSatin has a luster or satin finish, is excellent for producing imagery and photos with the broadest color gamut possible. Metallic has a pearlescent resin coating that gives prints an iridescent metallic finish.

Polyester Weather Resistant Re-Positional Stickers have a coated polyester matte surface with a re-positional adhesive on the back that does not mar drywall, glass, or metal surfaces. Photo-Tex is more cloth-like, with Opaque being minimally light-transmissive. Extra Sticky is light-transmissive and for rough surfaces.

Polyester Banner Cloth has a water-resistant matte coating. All are durable, almost impossible to tear, and do not react to humidity changes. All are used for POP-up signs, displays, backdrops, and outdoor banners. Block-out does not let light through. Heavyweight is light-transmissive thicker weave polyester. Medium is equivalent to media used for foldable posters and academic infographics.
